

Create a simple query on a single table tableadapter

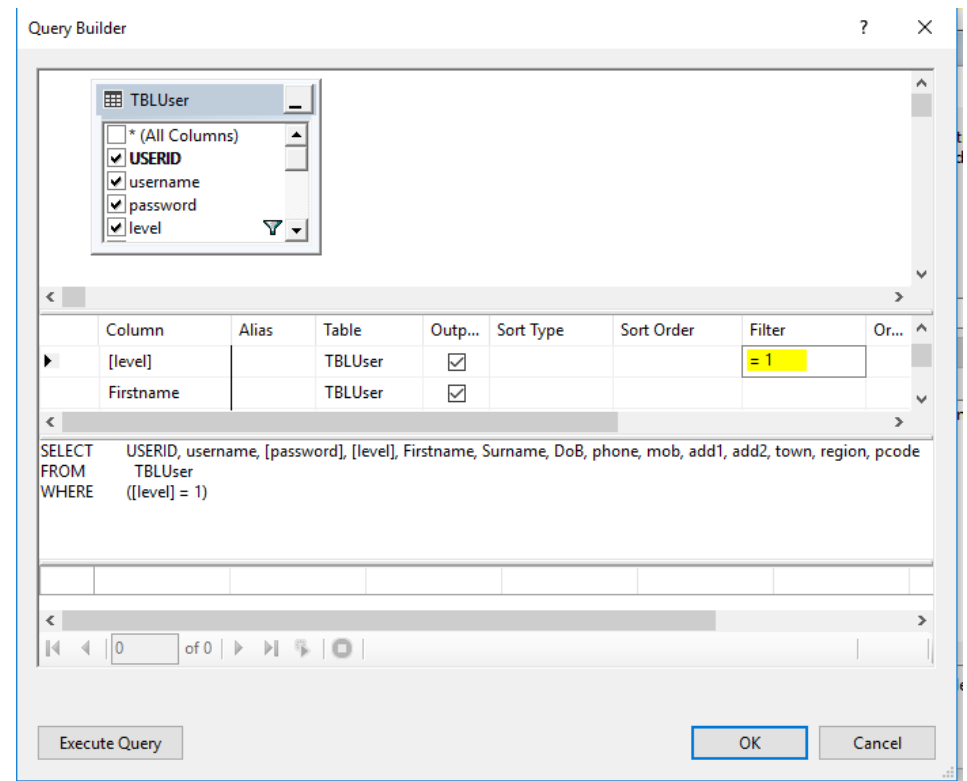

1. Either Right-Click on the adapter or select the arrow at top to get option
2. Then select Add Query

3. Give the query a name e.g.
4. Then select Query Builder

5. In the query Builder change the filter for level to equal 1 e.g.
6. Hit OK and OK
7. It will generate a button on a toolbar
8. The code for the query will be attached (see below).
9. Move this code to any event (e.g. button that you wish).
10. Repeat for the other filter queries.

```

Private Sub QryAdminToolStripButton_Click(sender As Object, e As EventArgs) Handles QryAdminToolStripButton.Click
    Try
        Me.TBLUserTableAdapter.QryAdmin(Me.DSDB.TBLUser)
    Catch ex As System.Exception
        System.Windows.Forms.MessageBox.Show(ex.Message)
    End Try
End Sub
  
```
